Follow the numbered steps to perform an analysis.

1. Click **Add...** to load dataset(s). Enter dataset year in **Label** column.

2. Map dataset variables to input variables by selecting dataset variables in drop-down lists.

3. Select tables and/or graphs to be included in report.

4. Click **Generate** button. Report is automatically displayed in Microsoft® Excel® or Excel Viewer.

Alternatively, drag variable names from dataset **Variables** tab and drop in fields in input **Variables** tab.

Hover cursor over input variable names and fields to see description in status bar.

Use the example project (**Project > Open Example Project**) to familiarize yourself with ADePT analysis steps, options, reports and other features.
